SUMMARY

Full-stack engineer with four years of experience, specializing in front-end development with Angular, Vue, and React. Bringing a complete stack view to client-side work allows me to build more robust interfaces, anticipate back-end constraints, and collaborate effectively across teams. I've worked on enterprise platforms for multinational clients and on immersive 3D configurators with Three.js.

EDUCATION

University of Padua

Sept. 2019 – Sept. 2022

[Bachelor of Science Degree, Computer Science](#)

- Top 3% of Graduating Class (being awarded 'Mille e una lode' scholarship)

WORK EXPERIENCE

Moku

Jun. 2022 – Today

Full-stack software engineer

Treviso, Italy

- **Currently leading front-end development** of a comprehensive platform for a well-established multinational dental company, streamlining the entire order lifecycle of orthodontic appliances across clinics, production, and shipping teams. **Operating with full autonomy across the stack** — managing the project board, resolving database inconsistencies, and implementing clear and actionable error surfacing at the UI layer, **significantly reducing back-end debugging overhead and accelerating deployment cycles.**
- **Improved a vehicle paperwork management application** by overhauling its codebase and integrating monitoring for asynchronous automated pipelines, enabling proactive issue resolution. **Independently identified a critical missing capability** (single-vehicle operation reimport), absent from the bulk-only system and implemented it, **accelerating the client's reimport workflow by at least an order of magnitude.**
- **Contributed to the development** of a high-realism 3D web configurator, delivering an immersive customer experience for our company's product.

SKILLS

Angular, Vue, React, TypeScript, Ruby on Rails, Ruby, GraphQL, REST, Three.js, TailwindCSS, Git, RxJS, Agile methodologies, Agentic Workflow, Proactive Thinking, Italian native speaker with professional fluency in English.
